

TRAILER AXLES

Our Axles are manufactured to the latest technical standards and precise production tolerances. Distinguish not only through the exceptional use of high grade raw materials and enhanced design features such as outboard brake drums, equal size large diameter wheel bearings, dust proofed seal bushing and self aligning spherical camshaft bearings, but also through outstanding attention to detail eg. both the brake drum and hub are machined externally to minimise imbalance and resultant wear and tear on suspension components as well as tyres.
